

Sample Indian Standard — Test Document

This is a synthetic PDF created only for testing the BIS RAG PDF-ingestion pipeline. It is not an official BIS standard.

1. Scope

This sample document describes requirements for steel pipes intended for water supply and general industrial applications. It is designed to test page extraction, section metadata, technical text, and tabular content.

2. Product Requirements

Pipes shall be manufactured from suitable steel and shall be free from defects that could adversely affect service performance. Dimensions, wall thickness, and mechanical properties shall conform to the specified requirements.

3. Testing and Inspection

The manufacturer shall carry out dimensional inspection and applicable mechanical tests. Test results shall be recorded and retained for quality-control purposes.

4. Technical Requirements

The following example values are included to test extraction from tables.

Parameter	Requirement	Unit
Nominal diameter	100–500	mm
Wall thickness	5–20	mm
Tensile strength	Minimum 410	MPa
Visual inspection	Required	—

5. Related Standards

For this synthetic example, related documents may include test methods, terminology standards, safety requirements, and installation guidance. These references are illustrative and are not official BIS references.

6. Compliance Note

A production system must obtain certification and regulatory requirements from verified BIS and government sources. The RAG system should cite the source document and page whenever presenting compliance information.
